

ANNUAL

WATER REPORT

Water testing performed in 2011

Presented by
Lake Shastina Community Services District

LAKE SHASTINA COMMUNITY SERVICES DISTRICT

May 14, 2012

Dear Customer,

Each year the Lake Shastina Community Services District is mandated by the State of California to submit a water “consumer confidence” report to each customer we serve. Unfortunately, the format for the State reports is difficult to read as it was most likely developed by people in the water field who already have a good grasp of the complexities of water systems and water quality.

This cover letter is my attempt to summarize in “layman’s” terms the report.

The District has three main wells that pump groundwater into our distribution system. The District does not take any water directly from Lake Shastina. The distribution system consists of over 40 miles of pipelines along with 4 elevated water tanks and various booster pumps. Currently, the water has been pure enough that the District has not been required by the State to chlorinate or treat the water in any way. This is a very unusual situation in California as most all water systems, at a minimum, chlorinate their water and many do even further chemical treatment prior to going to the customers. So we are very fortunate in this regard and hope that we will not be forced to chlorinate in the future.

Each year, the District samples the water delivered from each well. Water samples are also taken at various points around the District to get a representative sample of water quality as water goes through the water delivery system. We take over 50 tests per year at various locations to assure water quality. Flushing of water lines via fire hydrants is done every year to help remove sand or fine particles out of the water system, and keep water quality high. We also check our water tanks frequently and clean them as needed.

In 2011, the District’s water quality tests came out very well. In over 70 tests, all tests were within State Health Department drinking water standards.

Other chemical constituents, which occur naturally in groundwater, were well within California drinking water standards. The detailed numbers for various constituents are included in the attached report. We will continue to strive to bring our customers the best quality water possible, 24 hours per day, 365 days per year.

Should you have any questions on the report, please call me at the District Office at 530-938-3281.

Sincerely,

John R. McCarthy P.E.
General Manager

JRM:sc

2011 Consumer Confidence Report

Water System Name: Lake Shastina CSD

Report Date: 5/3/2012

LSCSD tests the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2011.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

Type of water source(s) in use: Wells

Name & location of source(s): Well No. 3 – Construction Yard, ¼ mile northwest of Administration Office;
Well No. 4 – 50 feet east Big Springs Road, 1-¼ miles north of Administration Office;
Well No. 9 – Seldom Seen Ranch, ½ mile west of Unit 9-2.

Drinking Water Source Assessment information: This is a detailed report compiled by the Department of Health Services Office of Drinking Water. If you are interested in the results, call 530-938-3281.

Time and place of regularly scheduled board meetings for public participation: The Lake Shastina Community Services District meetings are held on the 3rd Wednesday of each month at 5:00 p.m. in the Administration Office located at 16320 Everhart Drive, Lake Shastina.

For more information, contact: Robert Moser, Public Works Supervisor Phone: (530) 938-3281

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variations and Exemptions: Department permission to exceed an MCL or not comply with a treatment technique under certain conditions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (ug/L)

ppt: parts per trillion or nanograms per liter (ng/L)

ppq: parts per quadrillion or picogram per liter (pg/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- *Organic chemical contaminants*, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- *Radioactive contaminants*, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the state Department of Public Health (Department) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, and 7 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The Department allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

TABLE 1 – SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA

Microbiological Contaminants (complete if bacteria detected)	Highest No. of Detections	No. of months in violation	MCL	MCLG	Typical Source of Bacteria
Total Coliform Bacteria	(In a mo.) 0	0	More than 1 sample in a month with a detection	0	Naturally present in the environment
Fecal Coliform or <i>E. coli</i>	(In the year) 0	0	A routine sample and a repeat sample detect total coliform and either sample also detects fecal coliform or <i>E. coli</i>	0	Human and animal fecal waste

TABLE 2 – SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER

Lead and Copper (complete if lead or copper detected in the last sample set)	No. of samples collected	90 th percentile level detected	No. sites exceeding AL	AL	PHG	Typical Source of Contaminant
Lead (ppb)	13	None	0	15	0.2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	13	1.080	0	1.3	0.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

TABLE 3 – SAMPLING RESULTS FOR SODIUM AND HARDNESS

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	11/16/05	13.93 Average	10.6 – 17.2	none	none	Salt present in the water and is generally naturally occurring
Hardness (ppm)	11/16/05	119 Average	118 – 120	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring

*Any violation of an MCL or AL is asterisked. Additional information regarding the violation is provided later in this report.

TABLE 4 – DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Fluoride (ppm)	11/16/05	.233 Average	.100 – .300	2.0	1	Erosion of Natural Deposits
Arsenic (ppb)	11/16/05	1.63 Average	2.00 – 2.90	10	0.004	Erosion of Natural Deposits
Gross Alpha (pCi/L)	10/30/06	4.180	N/A	15	0	Erosion of Natural Deposits

TABLE 5 – DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Color (units)	5/18/06	5.00	N/A	15	N/A	Erosion of Natural Deposits
Manganese (ppb)	11/16/05	18.80	N/A	50	N/A	Leaching of Natural Deposits
Total Dissolved Solids (ppm)	11/16/05	177.00 Average	132.00 – 204.00	1000	N/A	Runoff/Leaching of Natural Deposits

Specific Conductance (uS/cm)	11/16/05	289.33 Average	278.00 – 301.00	1600	N/A	Substances that form ions in water
Chloride (ppm)	11/16/05	6.50 Average	5.90 – 7.60	500	N/A	Substances that form ions in water
Sulfate (ppm)	11/16/05	6.20 Average	5.40 – 6.90	500	N/A	Runoff/Leaching of Natural Deposits

TABLE 6 – DETECTION OF UNREGULATED CONTAMINANTS

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notification Level	Health Effects Language
None					

*Any violation of an MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA’s Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Lake Shastina Community Services District is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

VIOLATION OF A MCL, MRDL, AL, TT, OR MONITORING AND REPORTING REQUIREMENT				
Violation	Explanation	Duration	Actions Taken to Correct the Violation	Health Effects Language
None				

For Water Systems Providing Ground Water as a Source of Drinking Water

TABLE 7 – SAMPLING RESULTS SHOWING FECAL INDICATOR-POSITIVE GROUND WATER SOURCE SAMPLES

Microbiological Contaminants (complete if fecal-indicator detected)	Total No. of Detections	Sample Dates	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
<i>E. coli</i>	(In the year) 0	n/a	0	(0)	Human and animal fecal waste
Enterococci	(In the year) 0	n/a	TT	n/a	Human and animal fecal waste
Coliphage	(In the year) 0	n/a	TT	n/a	Human and animal fecal waste

If you have concern about water quality at Lake Shastina, you may contact the Administration Office at 530-938-3281. If you believe you have a need to address your concern with the State agency that licensed the water system; they may be reached at 530-224-4800.
