	_	Delivered the CCR to the California Public Utilities Commission					
This form is provided	as a convenience and n	nay be used to meet the certification requirement of section 64483(c), California Code of					

Regulations.

2014 Consumer Confidence Report

Water System Name:

U.S. Fish & Wildlife - San Luis NWR Complex

Report

05/15/15

Date:

We test the drinking water quality for many constituents as required by State and Federal Regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2014.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

Type of water source(s) in use: Groundwater Well

System # 2410021

Name & location of source(s): Well at Visitor's Center 7376 S. Wolfsen Rd. Los Banos, CA

Drinking Water Source Assessment information:

None Available

For more information, contact:

Phone #:

(209) 769-7205

TERMS USED IN THIS REPORT:

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Primary Drinking Water Standards (PDWS): MCLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

NTU: nephelometric turbidity unit

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

ppb: parts per billion or micrograms per liter (ug/L)

ppt: parts per trillion or nanograms per liter (ng/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining

In order to ensure that tap water is safe to drink, the USEPA and the State WaterResources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

Tables 1, 2, 3, 4, and 5 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

Microbiological	Highest	No. of			1	DLIFORM BACTERIA
Contaminants	No. of Detections	Months in Violation			MCLG	Typical Source of Bacteria
Total Coliform Bacteria	(In a Mo.)	0	More than 1 sample in a month with a detection		0	Naturally present in the environment
Fecal Coliform or <i>E. coli</i>	(In the Year)	0	A routine sample and a repeat sample detect total coliform and either sample also detects fecal coliform or <i>E. coli</i>		0	Human and animal fecal waste
TABLE 2 - SAM	IPLING RES	ULTS SHOV	VING THE	DETECT	ION OF L	EAD AND COPPER
Lead and Copper (and reporting units)	No. of Samples Collected (Date)	90 th Percentile Level Detected	No. Sites Exceeding AL	AL	PHG	Typical Source of Contaminant
Lead (ppb)	5 (08/28/14)	< 5	0	15	0.2	Internal corrosion of household water plumbing systems; discharges from industria manufacturers; erosion of natural deposits.
Copper (ppm)	5 (08/28/14)	0.5	0	1.3	0.3	Internal corrosion of household water plumbing systems; erosion of natural deposits; leaching from wood preservatives.
TAB	BLE 3 - SAMP	LING RESU	LTS FOR S	ODIUM	AND HAR	RDNESS
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	06/28/12	440	440	None	None	Salt present in the water and is generally naturally occurring
Hardness (ppm)	06/28/12	336	336	None	None	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring

^{*}Any violation of an MCL or AL is asterisked. Additional information regarding the violation is provided later in this report.

TABLE 4 - DETECTION OF CONTAMINANTS WITH A <u>PRIMARY</u> DRINKING WATER STANDARD

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Arsenic (ppb)	08/21/14	5	5	10	0.004	Erosion of natural deposits runoff from orchards; glass and electronics production wastes
Selenium (ppb)	08/21/14	7	7	50	30	Discharge from petroleum, glass and metal refineries; erosion of natural deposits; discharge from mines and chemical manufacturers; runoff from livestock lots (feed additive)
Radium 228 (pCi/l)	09/13/12	1	1	5	0.02	Erosion of natural deposits
Gross Beta Activity (pCi/L)	08/18/11	6	6	50	(0)	Decay of natural and man -made deposits

TABLE 5 - DETECTION OF CONTAMINANTS WITH A <u>SECONDARY</u> DRINKING WATER STANDARD

CI. : I			STANDAR	D		
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Total Dissolved Solids (ppm)	08/18/11	2300*	2300	1000	N/A	Runoff/leaching from natura deposits
Specific Conductance (umho/cm)	08/18/11	2500*	2500	1600	N/A	Substances that form ions when in water; seawater influence
Chloride (ppm)	08/18/11	890*	890	500	N/A	Runoff/leaching from natural deposits; seawater influence
Sulfate (ppm)	08/18/11	540*	540	500	N/A	Runoff/leaching from natural deposits' industrial wastes
Manganese (ppb)	08/18/11	54*	54	50	N/A	Leaching from natural deposits
Color (unit)	08/18/11	20*	20	15	N/A	Naturally-occurring organic materials
Turbidity (NTU)	08/18/11	6*	6	5	N/A	Soil runoff

^{*}Any violation of an MCL or AL is asterisked. Additional information regarding the violation is provided on the next page.

Additional General Information On Drinking Water

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers.

While your drinking water meets the current EPA standard for arsenic, it does contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the cost of removing arsenic from drinking water. The U.S. Environmental Protection Agency continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

Summary Information for Contaminants Exceeding an MCL or AL, or a Violation of any Treatment or Monitoring and Reporting Requirements

In 2011, total dissolved solids, specific conductance, chloride, sulfate, manganese, color, and turbidity were detected in the drinking water at levels above the allowable limits. The State has established the maximum allowable limits for total dissolved solids, specific conductance, chloride, sulfate, manganese, color, and turbidity as secondary limits, not as primary limits. These secondary MCLs are set to protect you from unpleasant aesthetic affects such as color, taste, odor, and the staining of plumbing fixtures (e.g., tubs and sinks), and clothing while washing. A violation of these MCLs do not pose a risk to public health.
