2014 Consumer Confidence Report

Water System Name:	Santa Anita Mutual	Water Company	Report Date:	June 26, 2015	5
	1	nstituents as required by s January 1 - December 31, 2	·	_	-
Este informe contiene inform	mación muy importante sob	ore su agua potable. Tradúzcal	o ó hable con algu	iien que lo entien	da bien.
Type of water source(s)	in use: Groundwate	r			
Name & general locatio	on of source(s): 96 W	ell (Primary) and 92 Well	(Secondary)		
Wells are located on Par	rcels 96 and 92 of the H	Hollister Ranch in Gaviota,	California		_
Drinking Water Source	Assessment informatio	n: Completed by Environ	nmental Health	Services and i	s available upon
request to the water con	npany.				
Time and place of regul	arly scheduled board m	neetings for public participa	tion: First S	aturday of Sept	tember at the
Hollister House, Hollist	er Ranch, Gaviota, Cal	ifornia			
For more information, c	contact: Matthew Prev	vitt	Phone: (3	805) 567-5400)

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: State Board permission to exceed an MCL or not comply with a treatment technique under certain conditions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (µg/L)

ppt: parts per trillion or nanograms per liter (ng/L)

ppq: parts per quadrillion or picogram per liter (pg/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

2014 SWS CCR Form Revised Jan 2015

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities

In order to ensure that tap water is safe to drink, the USEPA and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, 7, and 8 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

TABLE 1 –	SAMPLING	RESULT	S SHOV	VING THE DI	ETECTION	OF COLIF	FORM BACTERIA
Microbiological Contaminants (complete if bacteria detected)	Highest No. of Detections	No. of months in violation		М	MCL		Typical Source of Bacteria
Total Coliform Bacteria	N/A	0			More than 1 sample in a month with a detection		Naturally present in the environment
Fecal Coliform or E. coli	N/A	0		A routine sample and a repeat sample detect total coliform and either sample also detects fecal coliform or <i>E. coli</i>		0	Human and animal fecal waste
TABLE 2	- SAMPLIN	IG RESUI	LTS SHO	WING THE	DETECTIO	ON OF LEA	D AND COPPER
Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of samples collected	90 th percenti level detected	AT	AL	PHG	Typical Source of Contaminant
Lead (ppb)	8/20/14	5	1.65	0	15	0.2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	8/20/14	5	0.12	0	1.3	0.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
	TABLE 3	- SAMPL	ING RE	SULTS FOR S	SODIUM A	ND HARDI	NESS
Chemical or Constituent (and reporting units)	Sample Date			Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	8/22/12	85 6		65 - 192	none	none	Salt present in the water and is generally naturally occurring
Hardness (ppm)	8/22/12	213		163 - 476	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually

^{*}Any violation of an MCL or AL is asterisked. Additional information regarding the violation is provided later in this report.

2014 SWS CCR Form Revised Jan 2015

naturally occurring

TABLE 4 – DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD							
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant	
Gross Alpha	2011	3.14	.802 – 5.86	15	0	Erosion of natural deposits	
Barium	8/22/12	135.5	80 - 147	1,000	2,000	Erosion of natural deposits	
Selenium	8/22/12	10	0 – 10	50	50	Erosion of natural deposits	
Nitrate	12/10/14	0.4	0 – 0.4	45	45	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits	
Total Trihalomethanes (TTHM)	8/20/14	41.1	1.1 – 22.4	80	N/A	Byproduct of drinking water chlorination	
Haloacetic Acids (HHA)	8/20/14	9	0 - 5	60	N/A	Byproduct of drinking water chlorination	
TABLE 5 – DETE	TABLE 5 – DETECTION OF CONTAMINANTS WITH A <u>SECONDARY</u> DRINKING WATER STANDARD						
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant	
*Odor	8/22/12	435	32 - 512	3	N/A	Natural Occurring Organic Material	
*Manganese	8/22/12	212	200 – 280	50	N/A	Erosion of Natural Deposits	
Iron	8/22/12	11.2	0 - 70	300	N/A	Erosion of Natural Deposits	
*Turbidity	8/22/12	30.2	3.5 – 35.2	5	N/A	Elemental Sulfur	
Total Dissolved Solids	8/22/12	452	340 – 1,040	1,000	N/A	Erosion of Natural Deposits	
Specific Conductance	8/22/12	819	648 – 1,720	1,600	N/A	Minerals that form ions	
Chloride	8/22/12	69.3	77 - 293	500	N/A	Leaching of Natural Deposits	
Sulfate	8/22/12	49.7	9 – 240	500	N/A	Leaching of Natural Deposits	
	TABLE	6 – DETECTION	OF UNREGU	LATED CO	NTAMINA	NTS	
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notification Level		Health Effects Language	
Boron (ppb)	8/22/12	760	600 – 1,600	1,000		The babies of some pregnant woman, who drink water containing boron in excess of notification levels, may have an increased risk of developmental effects based on studies in laboratory animals.	

^{*}Any violation of an MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

No primary drinking water standards were exceeded. Three (3) secondary standards were exceeded (manganese, odor, and turbidity). These samples were taken at the wells prior to treatment (aeration, precipitation, oxidation, and filtration) which reduces these levels. Secondary standards are set for aesthetic purposes, and therefore pose no adverse health effects.

2014 SWS CCR Form Revised Jan 2015

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead-Specific Language for Community Water Systems: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Santa Anita Mutual Water Company is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

VIOLATION OF A MCL, MRDL, AL, TT, OR MONITORING AND REPORTING REQUIREMENT						
Violation	Explanation	Duration	Actions Taken to Correct the Violation	Health Effects Language		
Odor	Exceeded Secondary MCL	Ongoing	Aerated	None		
Manganese	Exceeded Secondary MCL	Ongoing	Filtered	High levels of manganese have been shown to result in effects on the nervous system		
Turbidity	Exceeded Secondary MCL	Ongoing	Filtered	None
