

Morongo del Sur Water System

Consumer Confidence Report
on Water Quality for 2016

Providing Quality Drinking Water in California Since 1929

Golden State Water Company is pleased to present our Annual Water Quality Report for 2016.

Bringing you clean drinking water is serious business, and our team of more than 500 water professionals is committed to ensuring you have reliable, high-quality water service available whenever you need it.

It is important for our customers to remain informed about the quality of the water that you and your family drink. You should rest assured knowing that Golden State Water tests water delivered to its customers to ensure it meets stringent quality standards.

Golden State Water strictly adheres to federal and state drinking water quality guidelines required by the United States Environmental Protection Agency (USEPA), the State Water Resources Control Board's Division of Drinking Water (DDW), and the California Public Utilities Commission (CPUC). We test for more than 230 elements in our water to ensure high quality. In 2016 alone, we invested more than half a million dollars on laboratory testing to meet regulatory standards.

In the uncommon event that drinking water standards are exceeded, we take immediate action to notify customers and restore normal service.

We pride ourselves on getting the job done right, and our team of experts strives to provide consistent water service and prevent water quality issues by regularly investing to maintain and improve our water system. This ensures our ability to provide you with high-quality drinking water—24 hours a day, seven days a week—is not compromised.

In January 2017, the State of California announced a new program encouraging schools to test their drinking water for the presence of lead. Golden State Water is proudly collaborating with schools in our service areas to test and ensure drinking water quality is not being compromised by plumbing issues within the school facilities. Supplying drinking water that complies with State and Federal requirements to families is of paramount importance, and we appreciate the opportunity to work closely with our local school administrators on this key initiative.

Our customers have always been our top priority, and we are always available to provide you with information or answer any questions you may have about your water service. We encourage customers to visit www.gswater.com and follow us on Twitter @GoldenStateH2O. In addition, Golden State Water's Customer Service Representatives are available around-the-clock for customers at 1.800.999.4033.

We have proudly served California for more than 85 years, and we currently provide water to approximately 1 million customers throughout the state. On behalf of the men and women at Golden State Water who serve you, thank you for being a valued customer.

Sincerely

Robert Sprowls
President and Chief Executive Officer
Golden State Water Company

Perry Dahlstrom
General Manager, Mountain-Desert District
Golden State Water Company

About the Company

Golden State Water Company, a subsidiary of American States Water Company (AWR), provides water service to approximately one million Californians located within 75 communities throughout 10 counties in Northern, Coastal and Southern California. The Company also distributes electricity to more than 24,000 customers in the Big Bear recreational area of California. AWR's contracted services subsidiary, American States Utility Services, Inc., provides operations, maintenance and construction management services for water and wastewater systems located on military bases throughout the country.

Making Conservation a Way of Life

After five consecutive dry years depleted California's water resources, steady rain and snowfall during the winter months have improved conditions at many of the state's reservoirs and contributed to statewide snowpack levels that are far above the historical average. This is great news for California's water situation; however, we must remain diligent with responsible water use and make water conservation a way of life. California has been prone to long stretches of drought, and there is no guarantee that long-range weather patterns will produce such an abundance of water to our state. To learn more about water-use efficiency and the conservation resources available in your area, please visit www.gswater.com/conservation or call 1.800.999.4033.

Where Does My Water Come From?

Water delivered to customers in the Morongo del Sur System is groundwater pumped from the Morongo Valley portion of the Morongo Basin located east and west of the Twenty-Nine Palms Highway between Morongo Valley and Yucca Valley.

Glossary of Terms

Maximum Contaminant Level (MCL)

The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the public health goals and maximum contaminant level goals as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste and appearance of drinking water.

California Notification Level (NL)

Non-regulatory, health-based advisory levels established by the Division of Drinking Water (DDW) for contaminants in drinking water for which an MCL has not been established.

Maximum Contaminant Level Goal (MCLG)

The level of contaminant in drinking water below which there is no known or expected risk to health. Maximum contaminant level goals are set by the United States Environmental Protection Agency (USEPA).

Maximum Residual Disinfectant Level (MRDL)

The highest level of a disinfectant allowed in drinking water. There is convincing evidence that the addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG)

The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standard (PDWS)

MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.

Public Health Goal (PHG)

The level of a contaminant in drinking water below which there is no known or expected risk to health. Public health goals are set by the California Environmental Protection Agency (CalEPA).

Regulatory Action Level (AL)

The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

For People with Sensitive Immune Systems

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised people, such as those individuals with cancer undergoing chemotherapy, those who have undergone organ transplants, those with HIV/AIDS or other immune system disorders, some elderly populations, and infants, can be particularly at risk from infections. These people should seek advice from their health care providers.

If You Have Questions – Contact Us

For information about your water quality or to find out about upcoming opportunities to participate in public meetings, please contact our 24-hour Customer Service Center at 1-800-999-4033. Visit us online at www.gswater.com or email us at customerservice@gswater.com.

Este informe contiene información muy importante sobre su agua de beber. Tradúzcalo o hable con alguien que lo entienda bien.

The USEPA and Centers for Disease Control issue guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants. To obtain a copy of these guidelines, please call the USEPA's Safe Drinking Water Hotline at 1-800-426-4791.

Cross Connection Control Program

Golden State Water's Cross Connection Control Program provides a level of certainty that the water in the company's distribution system is protected from possible backflow of contaminated water from commercial or industrial customers' premises. For additional information, visit <http://www.gswater.com/protecting-our-drinking-water/>.

Connect with us to learn more!

Visit www.gswater.com to learn how to:

- ▶ Access the latest Water Quality Report for your area
- ▶ Get the latest updates and news regarding the drought and state/local restrictions
- ▶ Learn more about water-use efficiency, including programs and rebates in your area
- ▶ Understand your water bill and learn about payment options
- ▶ Obtain information about programs for low-income customers (CARW)
- ▶ Sign up to receive email updates about your water service.

For additional information, please contact our 24-hour Customer Service Center at **1-800-999-4033** or email us at customerservice@gswater.com.

Measurements

Water is sampled and tested consistently throughout the year to ensure the best possible quality.

Contaminants are measured in:

- ▶ Parts per million (ppm) or milligrams per liter (mg/L)
- ▶ Parts per billion (ppb) or micrograms per liter (µg/L)
- ▶ Parts per trillion (ppt) or nanograms per liter (ng/L)
- ▶ Grains per gallon (grains/gal) – A measurement of water hardness often used for sizing household water softeners. One grain per gallon is equal to 17.1 mg/L of hardness.
- ▶ MicroSiemens per centimeter (µS/cm) – A measurement of a solution's ability to conduct electricity
- ▶ Nephelometric Turbidity Units (NTU) – A measurement of the clarity of water. Turbidity in excess of 5 NTU is noticeable to the average person.
- ▶ PicoCuries per liter (pCi/L) – A measurement of radioactivity in water.

If this is difficult to imagine, think about these comparisons:

| Parts per million: | Parts per billion: | Parts per trillion: |
|----------------------|--------------------------|--|
| 1 second in 12 days | 1 second in 32 years | 1 second in 32,000 years |
| 1 inch in 16 miles | 1 inch in 16,000 miles | 1 inch in 16 million miles |
| 1 drop in 14 gallons | 1 drop in 14,000 gallons | 10 drops in enough water to fill the Rose Bowl |

YOUR WATER MEETS ALL CURRENT FEDERAL AND STATE REQUIREMENTS

Morongo del Sur Water System – Source Water Quality

| Primary Standards - Health Based (units) | Primary MCL | PHG (MCLG) | Range of Detection | Average Level | Most Recent Sampling Date | Typical Source of Constituent |
|---|--------------------|------------|--------------------|---------------|---------------------------|---|
| Inorganic Constituents | | | | | | |
| Fluoride (mg/L) | 2.0 | 1 | n/a | 0.59 | 2014 | Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories |
| Hexavalent Chromium (µg/L) | 10 | 0.02 | 2.9 - 8.0 | 4.8 | 2014 | Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits |
| Nitrate [as N] (mg/L) | 10 | 10 | ND - 0.45 | ND | 2016 | Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits |
| Radioactive Constituents | | | | | | |
| Uranium (pCi/L) | 20 | 0.43 | ND - 19 | ND | 2016 | Erosion of natural deposits |
| Secondary Standards - Aesthetic (units) | Secondary MCL | PHG (MCLG) | Range of Detection | Average Level | Most Recent Sampling Date | Typical Source of Constituent |
| Chloride (mg/L) | 500 | n/a | n/a | 17 | 2014 | Runoff/leaching from natural deposits; seawater influence |
| Foaming Agents [MBAS] (µg/L) | 500 | n/a | n/a | 0.16 | 2014 | Municipal and industrial waste discharges |
| Specific Conductance (µS/cm) | 1600 | n/a | n/a | 780 | 2014 | Substances that form ions when in water; seawater influence |
| Sulfate (mg/L) | 500 | n/a | n/a | 160 | 2014 | Runoff/leaching from natural deposits; industrial wastes |
| Turbidity (units) | 5 | n/a | n/a | 0.86 | 2014 | Soil runoff |
| Total Dissolved Solids (mg/L) | 1000 | n/a | n/a | 500 | 2014 | Runoff/leaching from natural deposits |
| Other Parameters (units) | Notification Level | PHG (MCLG) | Range of Detection | Average Level | Most Recent Sampling Date | Typical Source of Constituent |
| Alkalinity (mg/L) | n/a | n/a | n/a | 240 | 2014 | |
| Calcium (mg/L) | n/a | n/a | n/a | 82 | 2014 | |
| Hardness [as CaCO ₃] (mg/L) | n/a | n/a | n/a | 270 | 2014 | The sum of polyvalent cations present in the water, generally magnesium and calcium; the cations are usually naturally occurring |
| Hardness [as CaCO ₃] (grains/gal) | n/a | n/a | n/a | 16 | 2014 | |
| Magnesium (mg/L) | n/a | n/a | n/a | 17 | 2014 | |
| pH (pH units) | n/a | n/a | n/a | 7.9 | 2014 | |
| Potassium (mg/L) | n/a | n/a | n/a | 8.5 | 2014 | |
| Sodium (mg/L) | n/a | n/a | n/a | 64 | 2014 | Refers to the salt present in the water and is generally naturally occurring |

Morongo del Sur Water System – Distribution Water Quality

| Disinfection Byproducts and Disinfectant Residuals (units) | Primary MCL (MRDL) | PHG (MRDLG) | Range of Detection | Average Level | Most Recent Sampling Date | Typical Source of Constituent |
|--|--------------------|-------------|---|---------------|---------------------------|---|
| Chlorine [as Cl ₂] (mg/L) | (4.0) | (4) | 0.5 - 3.2 | 1.77 | 2016 | Drinking water disinfectant added for treatment |
| Inorganic Constituents (units) | Action Level | PHG (MCLG) | Sample Data | 90th % Level | Most Recent Sampling Date | Typical Source of Constituent |
| Copper (mg/L) | 1.3 | 0.3 | None of the 10 samples collected exceeded the action level. | 0.09 | 2016 | Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives |

ND = Not Detected

CaCO₃ = Calcium Carbonate

This table includes data only on constituents that were detected.

Drought tolerant landscaping adds beauty while helping preserve our valuable water resources.

Source Water Assessment

GSWC conducted a source water assessment in August 2000 for each groundwater well serving the customers of its Morongo del Sur System.

Both of the groundwater wells are considered most vulnerable to the following activities, which have been associated with contaminants that have been detected in the water supply: automotive repair shops and low-density septic systems.

A copy of the assessment may be viewed at:

DDW San Bernardino District Office
464 West 4th St., Suite 437, San Bernardino, CA 92401
or

Golden State Water Company, Apple Valley Office
13608 Hitt Rd., Apple Valley, CA 92308

You may request a summary of the assessment be sent to you by contacting:

DDW San Bernardino District Office at 1-909-383-4328

For more details, contact Dawn White, Water Quality Manager, at 1-800-999-4033.

Laboratory Analyses

Through the years, we have taken thousands of water samples to determine the presence of any radioactive, biological, inorganic, volatile organic, or synthetic organic contaminants in your drinking water. The table we provide shows only detected contaminants in the water.

Even though all the substances listed here are under the Maximum Contaminant Level (MCL), we feel it is important that you know exactly what was detected and how much of these substances were present in your water. Compliance (unless otherwise noted) is based on the average level of concentration below the MCL. The state allows us to monitor for some contaminants less than once per year because the concentrations do not change frequently. Some of our data, while representative, is more than a year old.

Lead — If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Golden State Water is responsible for providing high-quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information about lead in drinking water, testing methods and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 1-800-426-4791 or at www.epa.gov/safewater/lead.

Uranium — Some people who drink water containing uranium in excess of the MCL over many years may have kidney problems or an increased risk of getting cancer.

Notification: Failure to Meet Treatment Requirements

Our water system recently violated a drinking water requirement. The three groundwater production wells that provide drinking water to the Morongo Del Sur water system contain natural occurring uranium at concentrations above the MCL. The Domestic Water Supply Permit for the water system which is issued by the State Water Resources Control Board – Division of Drinking Water requires that we treat these drinking water sources to remove uranium to concentrations below the MCL.

Due to a piping failure at our uranium treatment facility, we did not meet the requirement of treating the groundwater for uranium from May 24, 2017 to June 7, 2017. The uranium treatment system was bypassed during this time period. It was necessary to bypass uranium treatment to maintain water service until the treatment facility piping was repaired.

There was no immediate risk. If there had been an immediate risk, you would have been notified immediately. However, some people who drink water containing uranium in excess of the MCL over many years may have kidney problems or an increased risk of getting cancer. If you have other health issues concerning the consumption of this water, you may wish to consult your doctor.

For more information, please contact Alex Chakmak at 909-592-4271 or 13608 Hitt Road in Apple Valley, California.

Please share this information with all the other people who drink this water, especially those who may not receive this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this information in a public place or distributing copies by hand or mail.

Secondary Notification Requirements

Upon receipt of notification from a person operating a public water system, the following notification must be given within 10 days [Health and Safety Code Section 116450(g)]:

- ▶ **SCHOOLS:** Must notify school employees, students, and parents (if the students are minors).
- ▶ **RESIDENTIAL RENTAL PROPERTY OWNERS OR MANAGERS** (including nursing homes and care facilities): Must notify tenants.
- ▶ **BUSINESS PROPERTY OWNERS, MANAGERS, OR OPERATORS:** Must notify employees of businesses located on the property.

Risk to Tap and Bottled Water

Drinking water, including bottled water, may reasonably be expected to contain small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline at 1-800-426-4791.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the layers in the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, which can pick up substances resulting from the presence of animal or human activity.

To be certain that tap water is safe to drink, the USEPA and the DDW prescribe regulations limiting the amount of contaminants in water provided by public water systems. United States Food and Drug Administration (USFDA) and DDW regulations also provide the same public health protection by establishing limits for contaminants in bottled water.

Contaminants in Drinking Water Sources May Include:

- ▶ Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife
- ▶ Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, and farming
- ▶ Pesticides and herbicides that may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses
- ▶ Organic chemical contaminants, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff and septic systems
- ▶ Radioactive contaminants that can be naturally occurring or be the result of oil and gas production and mining activities

Hydrant Flushing

Hydrant flushing is an essential maintenance procedure that all water providers must perform periodically to ensure the delivery of water that meets state and federal drinking water standards.

Flushing is a necessary part of maintaining the water system and the quality of the water within it. Golden State Water has modified procedures to minimize the amount of water released during flushing activities. Water used for flushing represents less than 1 percent of the total water usage in each of our water systems.

For more information about hydrant flushing, visit <http://www.gswater.com/flushing-info/>
