		Posting the O	CCR on the Internet at www. IV, K12. Cd. US					
		Mailing the	CCR to postal patrons within the service area (attach zip codes used)					
		Advertising	ailability of the CCR in news media (attach copy of press release)					
			the CCR in a local newspaper of general circulation (attach a copy of the ce, including name of newspaper and date published)					
		Posted the C	CR in public places (attach a list of locations)					
		Delivery of multiple copies of CCR to single-billed addresses serving several persons, such as apartments, businesses, and schools						
		Delivery to o	community organizations (attach a list of organizations)					
		Other (attach	a list of other methods used)					
			g at least 100,000 persons: Posted CCR on a publicly-accessible internet site at sss: www					
	For p	rivately-owned	d utilities: Delivered the CCR to the California Public Utilities Commission					

This form is provided as a convenience and may be used to meet the certification requirement of section 64483(c), California Code of Regulations.

2015 Consumer Confidence Report

Water System Name: Round Valley School

Report Date: September 22, 2016

We test the drinking water quality for many constituents as required by State and Federal Regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2015.

> Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

Type of water source(s) in use: Groundwater well.

Name & location of source(s): Well 01 is located on the school grounds.

Drinking Water Source Assessment information: The source water assessment was completed in November 2002. The source is considered to be most vulnerable to the following activities not associated with a detected contaminant: livestock operations in surrounding pastures, and low density on-site septic systems. A copy of the complete assessment may be viewed at the Inyo County Environmental Health Services, 207 W. South St, Bishop, or call (760) 873-7865.

Time and place of regularly scheduled board meetings for public participation: Call for schedule.

For more information, contact: Cathy Wagner-Molina

Phone: (760) 387-2525

TERMS USED IN THIS REPORT:

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a disinfectant added for water treatment below which there is no known or expected MRDLGs are set by the U.S. risk to health. Environmental Protection Agency.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: Department permission to exceed an MCL or not comply with a treatment technique under certain conditions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (ug/L)

ppt: parts per trillion or nanograms per liter (ng/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial
 processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural
 application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the state Department of Health Services (Department) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

Tables 1, 2, 3, 4, and 5 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The Department allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

Microbiological Contaminants	Highest No. of detections	No. of months in violation	MCL		MCLG	Typical Source of Bacteria
Total Coliform Bacteria	(In a mo.) <u>0</u>	0	More than 1 sample in a month with a detection		0	Naturally present in the environment
Fecal Coliform or E. coli	(In the year)	0	A routine sample and a repeat sample detect total coliform and either sample also detects fecal coliform or <i>E. coli</i>		0	Human and animal fecal waste
TABLE	2 - SAMPLIN	G RESULT	TS SHOWING	THE DETE	CTION OF	LEAD AND COPPER
Lead and Copper	No. of samples collected	90 th percentile level detected	No. sites exceeding AL	AL	PHG	Typical Source of Contaminant
Lead (ppb) 6/9/13	5	<0.5	0	15	0.2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm) 6/9/13	5	0.515	0	1.3	0.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
	ARREST DESCRIPTION OF THE PARTY	-		EOD CODII	IM AND H	IARDNESS
	TABLE 3	- SAMPLI	NG RESULTS	FOR SOUT	7111 71112 11	
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
	Sample	Level	Range of		PHG	

^{*}Any violation of an MCL or AL is marked with an asterisk. Additional information regarding the violation is provided later in this report.

Chemical or Constituent Sample Level Range of MCL PHG Typical Source of Contaminant								
(and reporting units)	Date	Detected	Detections	[MRDL]	(MCLG) [MRDLG]			
Fluoride (ppm)	10/3/06	0.4	n/a	2.0	1	Erosion of natural deposits		
Nitrate as N (ppm)	12/8/15	0.6	n/a	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits		
TABLE 5 - DETEC	CTION OF (CONTAMIN	ANTS WITH	A SECONI	DARY DRIN	KING WATER STANDARD		
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant		
Chloride (ppm)	3/11/94	3	n/a	500	n/a	Erosion of natural deposits		
Iron (ppb)	12/5/11	80	n/a	300	n/a	Erosion of natural deposits		
Specific Conductance	3/11/94	437	n/a	1600	n/a	Substances that form ions when in water		
(uS/cm)		1						
(uS/cm) Sulfate (ppm)	3/11/94	112	n/a	500	n/a	Erosion of natural deposits		

^{*}Any violation of an MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Summary Information for Contaminants Exceeding an MCL, MRDL, or AL, or a Violation of Any Treatment Technique or Monitoring and Reporting Requirement

VIOLATION OF A MCL, MRDL, AL, TT, OR MONITORING AND REPORTING REQUIREMENT							
Violation	Explanation	Duration	Actions Taken to Correct the Violation	Health Effects Language			
Total Coliform Rule Monitoring & Reporting Violation	No routine coliform sample was collected and analyzed for January 2015	January 2015	A sample was collected on 2/23/15, which brought our water system back in to compliance	The health effects of this violation are unknown
